Decorative panels

Wooden decorative panels for interior architecture projects

Decustik decorative panels

Since 1982 have been manufacturing decorative and acoustic panels for architectural indoor projects.

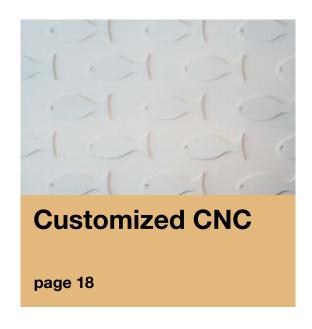

Decustik designs and manufactures decorative and acoustic panels for walls, ceilings and furniture for auditoriums, theatres, restaurants, hotels, and all kind of interior projects with special technical and design requirements.

We collaborate with architects and interior designers until we achieve the best results for your projects. We strive to continuously develop our technical capabilities and we are proud of contributing to your projects with the experience and precision of our excellent team of collaborators.

We hope that this catalog inspires you in your future projects.

The mecakim / decustik team

Decorative 3D

Machined decorative panels

Three dimensional machined wood panels, with a wide choice of options and the possibility of adapting the designs to the dimensions of each surface.

Decustik decorative 3D | model PD002 CANYA |

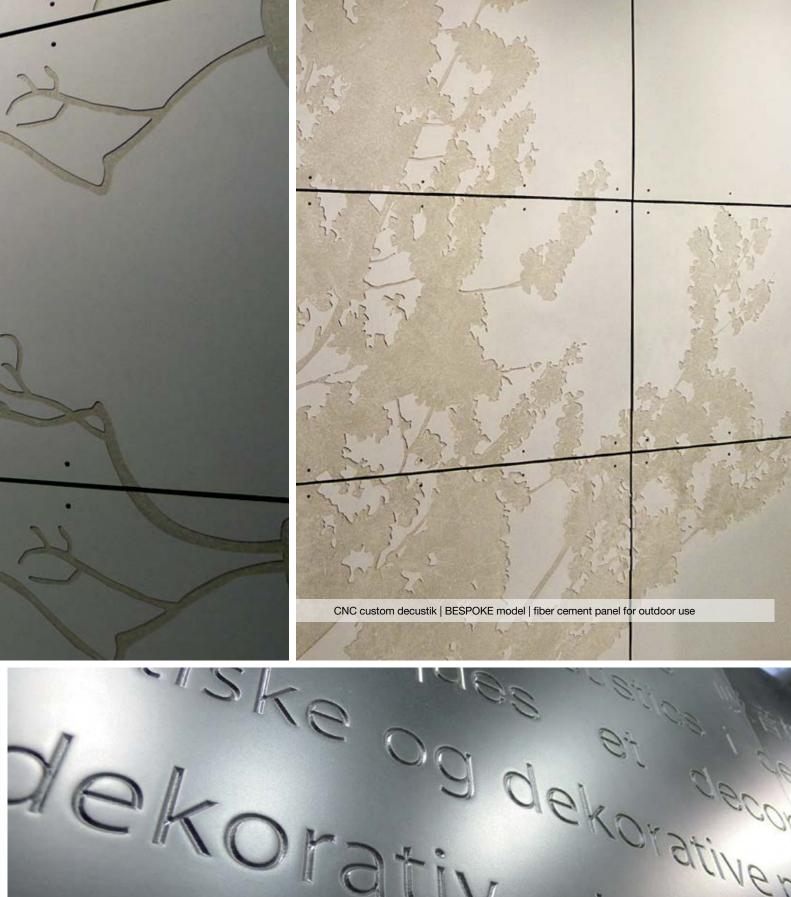

CNC custom decustik | BESPOKE model | MDF panel core colored and white lacquered

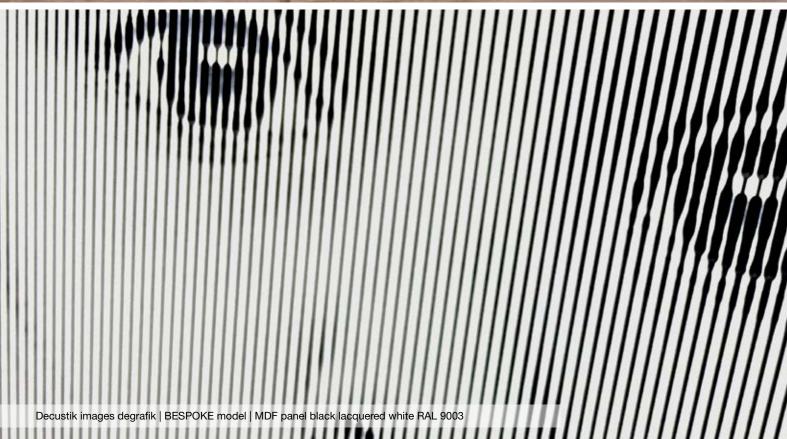

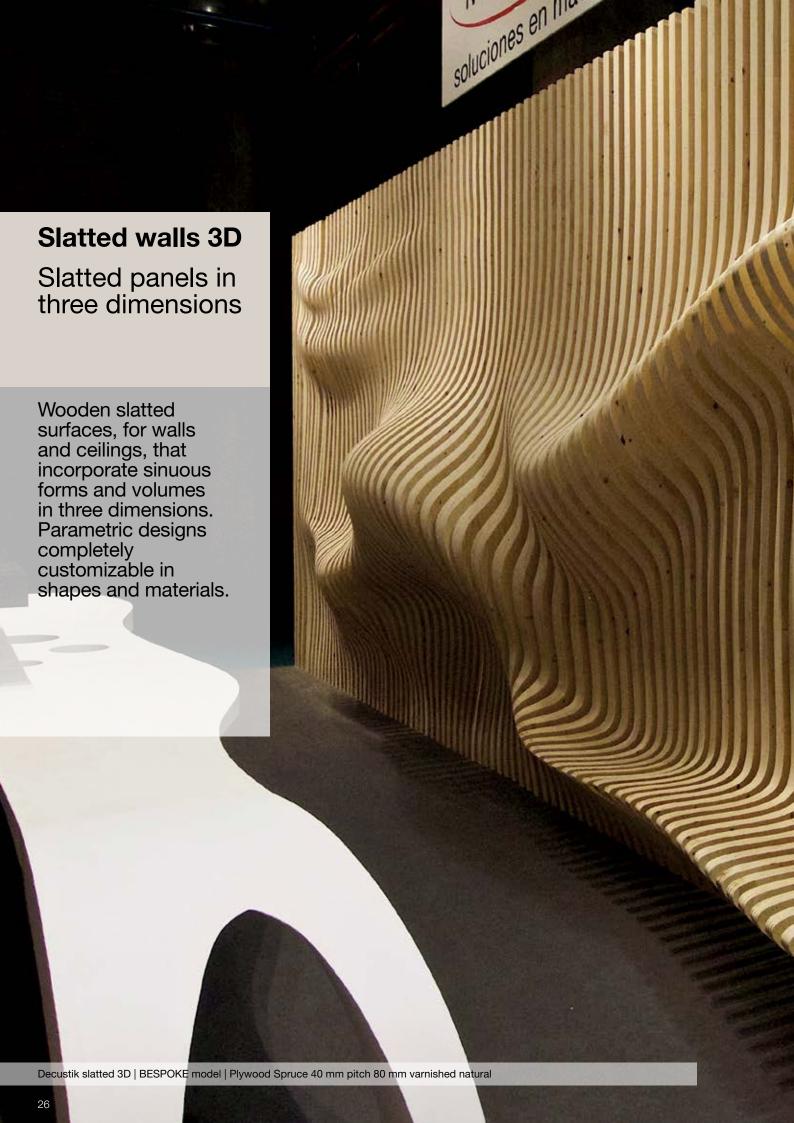

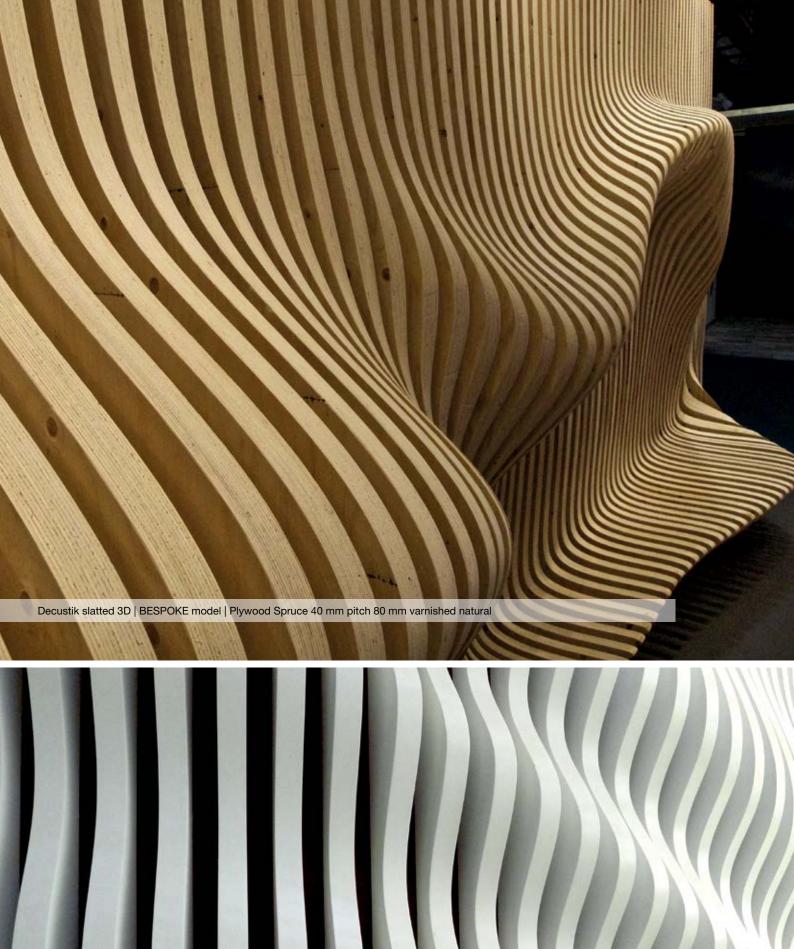

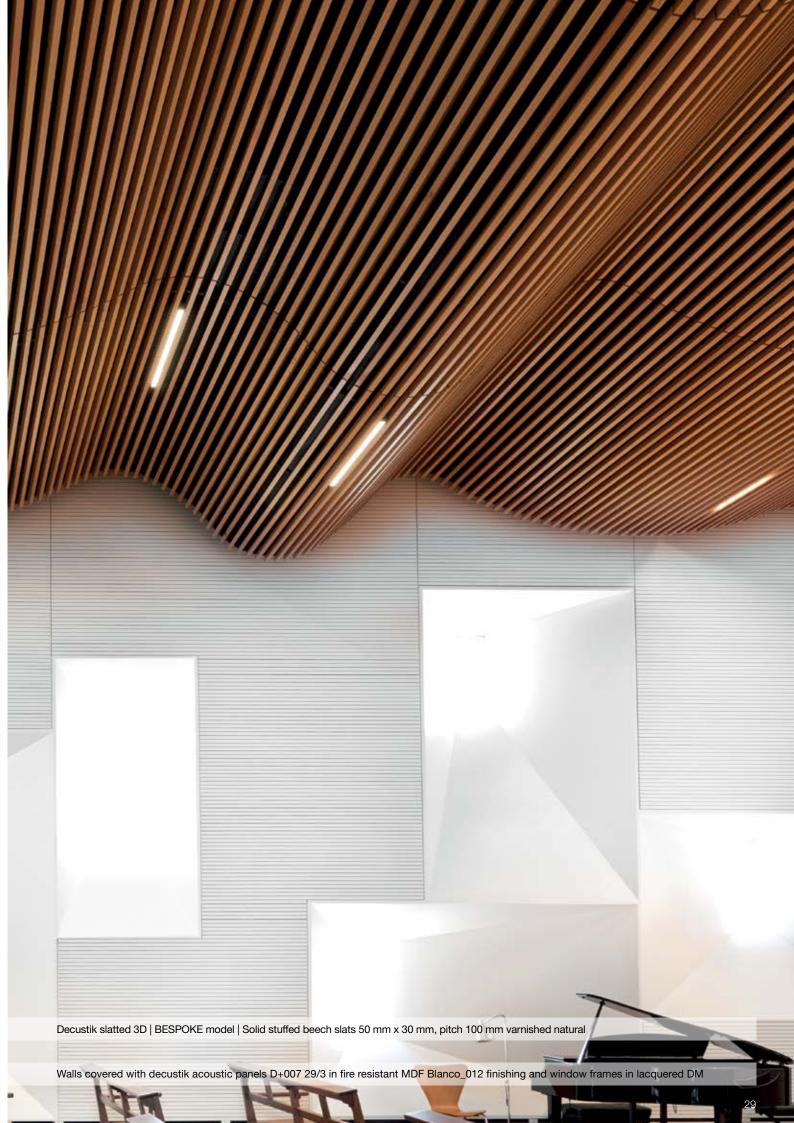

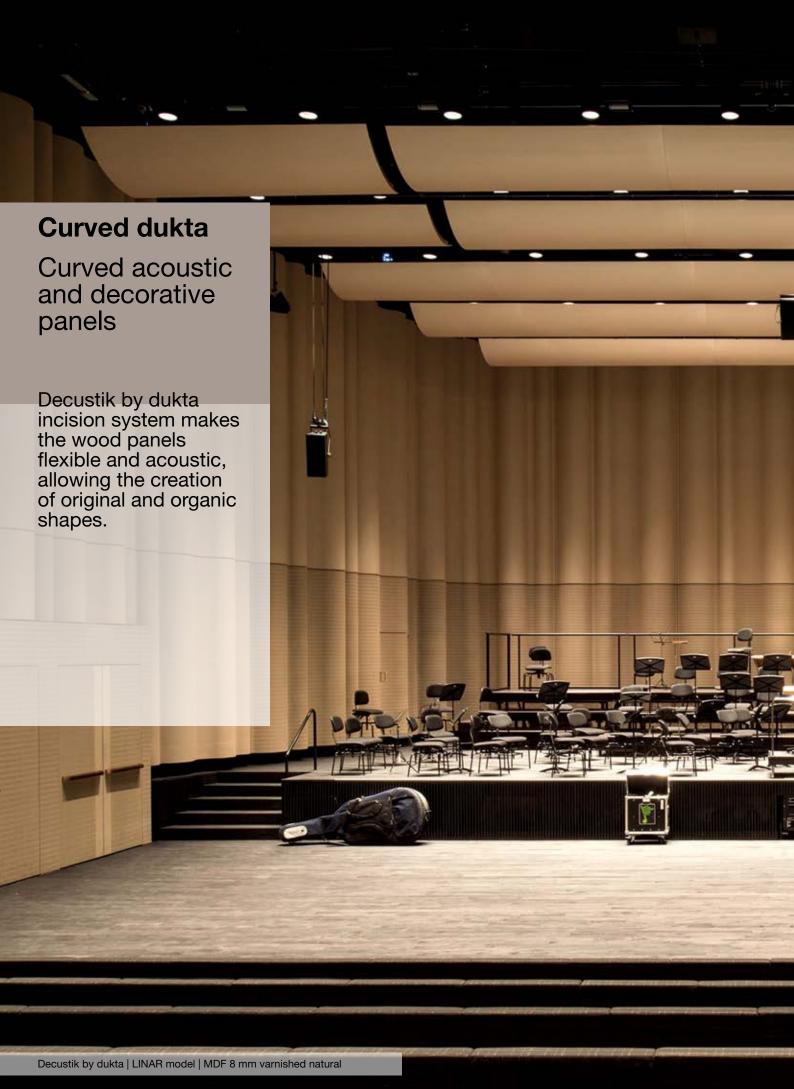

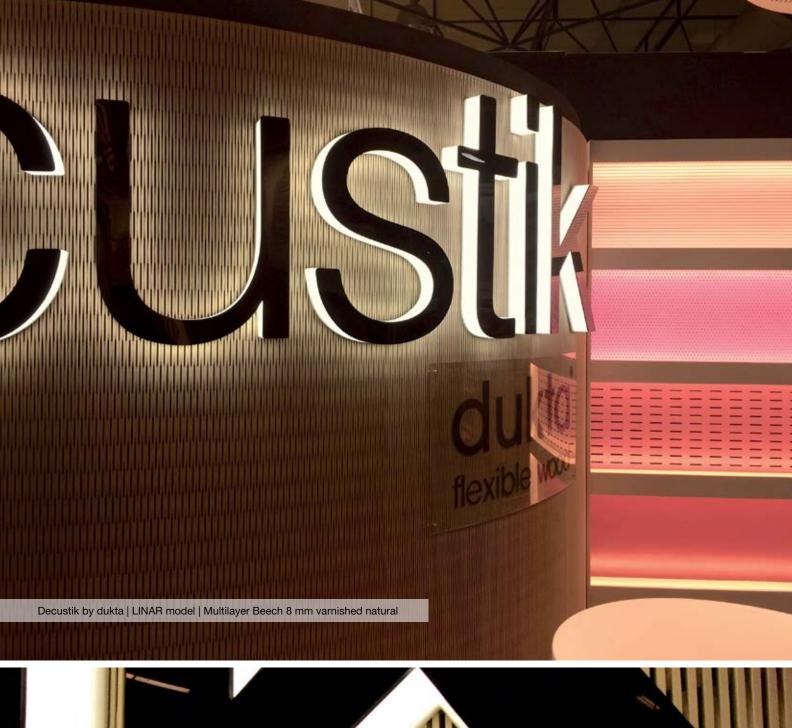

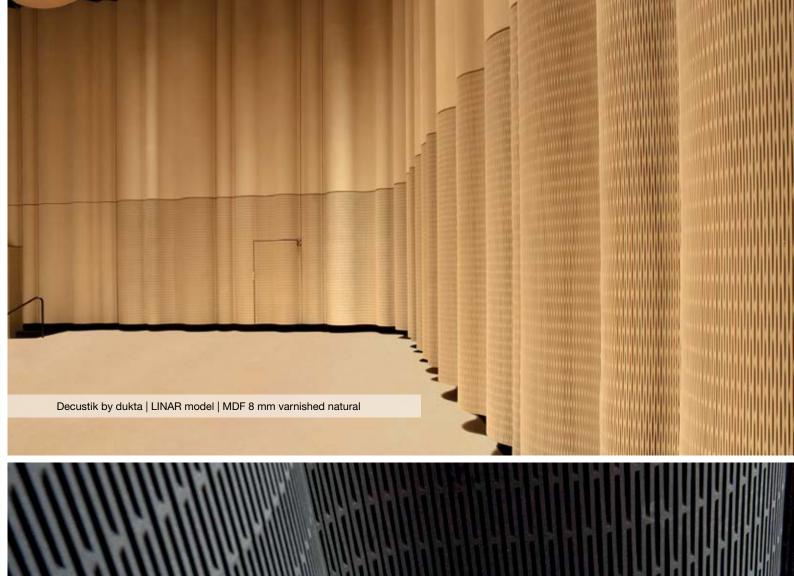

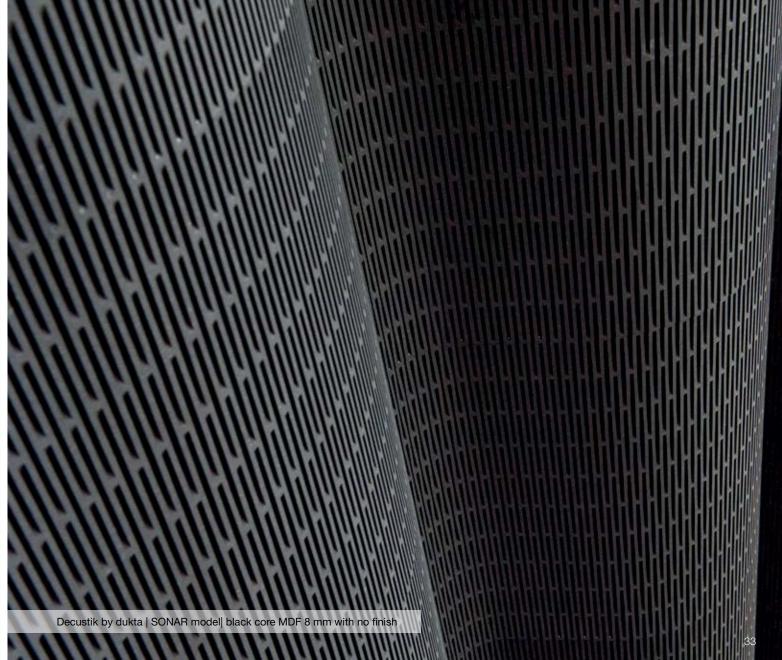

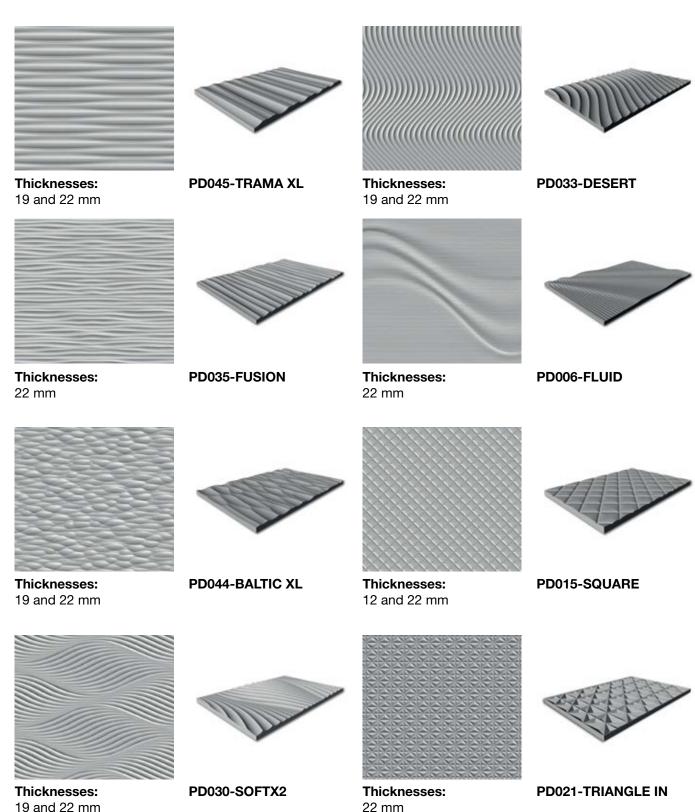

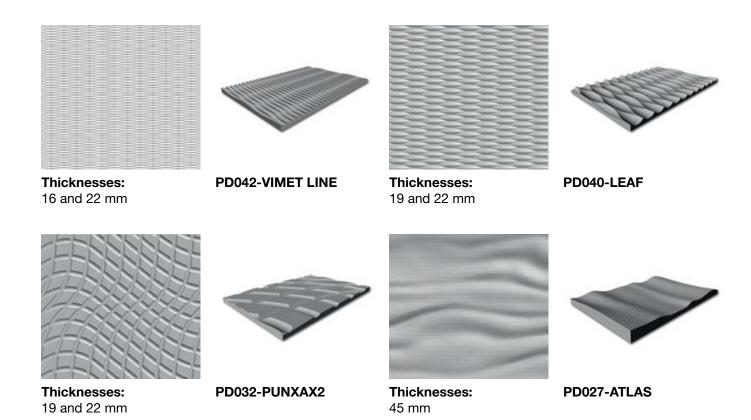

Decorative 3D

Materials and dimensions: Decustik decorative panels are manufactured in standard dimensions (generally multiples of 600 mm) and also bespoke manufactured to easily fit measurements of every wall. Panels are manufactured using MDF wood fiber boards with lacquered finish. Our designs can be manufactured with a continuous pattern, identifiing every panel with a code for an easy set up.

More designs at www.decustik.com

Standard dimensions: Standard panels measure 2400x1200 mm, 2400x600 mm, 1200x1200 mm, 1200x600 mm and 600x600 mm with designs in vertical or horizontal options. Thickness of panels changes according to every design. Other dimensions are possible depending on suppliers' availability.

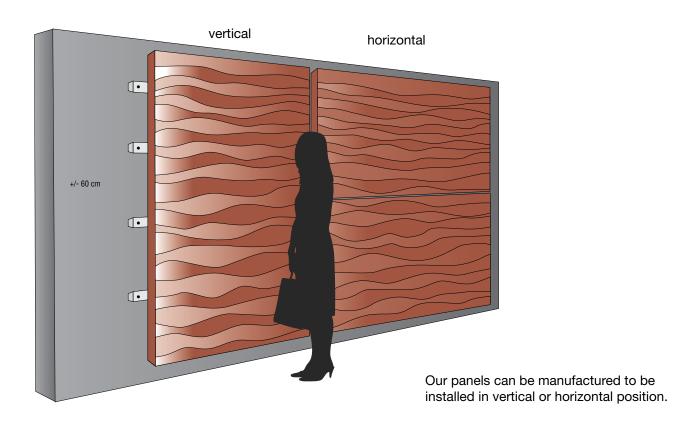

2400x1200 mm	2400x 600 mm	1200x1200 mm	
		1200x600 mm	600x 600 mm

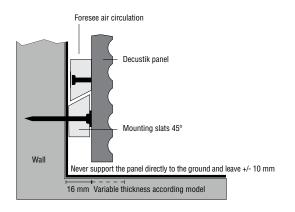

Surface finishes: When requested, our panels are delivered perfectly finished and ready for installation. Complete range of RAL and NCS chart is available. We can supply also with pre-finished white primer, ready to apply the final lacquer or paint on site after the panels have been installed.

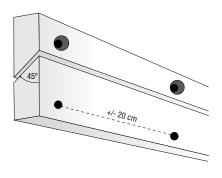

Warm grays **RAL 9010 NCS NCS NCS NCS** Pure white S 0300-N S 2002-Y S 5006-Y20R S 7500-N **Cold grays RAL 9003** NCS **NCS RAL 9006 RAL 9005** S 1000-N 2005 R80B Signal white Aluminium Jet black **Yellows RAL 1003 RAL 1015 NCS NCSS** S 0585-Y40R 0580-Y20R Signal yellow Light ivory Reds NCS NCS NCS NCS S 3055-R40B S 2570-R S 1080-R S 0515-R Greens **RAL 7032** NCS **NCS** NCS S 1060-G90Y S 3050-G90Y S 6005-G20Y Pebble grey **Blues RAL 5021 NCS NCS NCS** Water blue S 3020-B50G S 4040B S 1040-R90B

Storage and handling: As panels are usually delivered completely finished and ready for installation, they must be handled with care. It is also mandatory to acclimate the panels to the final temperature and humidity conditions of the room at least 48 hours prior to installation.

Installation on walls: We recommend to use our installation battens, placed every 600 mm approximately. To avoid humidity issues, the panels should never be installed in contact with the floor, leaving +/- 10 mm. We also recomend to leave gaps between battens to facilitate air circulation behind panels.

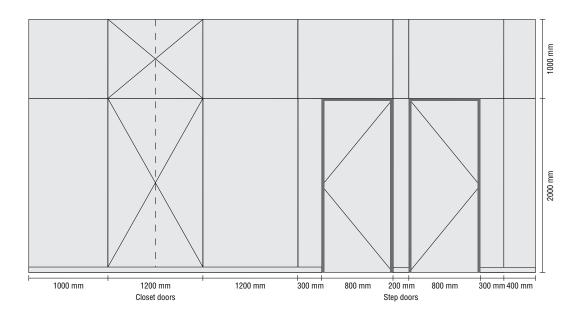

Mounting slats measuring 2400 mm long and 16 mm thick are available.

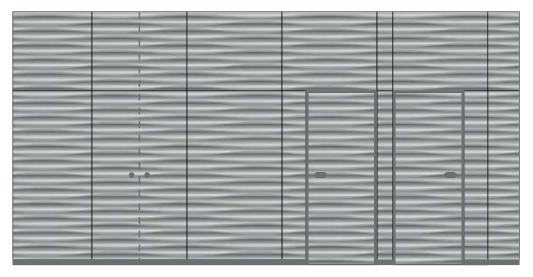

Customized CNC

When manufacturing our customized CNC panels we generally use MDF boards of different thicknesses, according to specifications required in each model. Dimensions are limited to available materials (usually 2400x1200 mm) or dimensions of our machines (generally 3000x1500 mm). For a maximum use of the materials we recommend to adapt the layout of panels to 2400x1200 mm, 2400x600 mm, 1200x1200 mm, 1200x600 mm or 600x600 mm. You must send us your designs in .dwg, .dxf, .ai or other vectorial file formats, along with a drawing displaying your proposed layout. We will review your proposals and prepare a drawing with a simulation of each wall for approval. The panels are supplied numbered to facilitate set up.

Modulation example of the decorative panel

The panels are manufactured numbered and ready for set up.

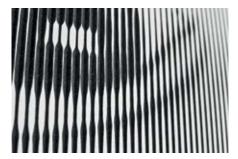

Degrafik images

The Degrafik system allows you to reproduce an image by machining lines of different widths and depths. Degrafik panels are usually manufactured using black colored MDF wood fiber boards with a white laminated or lacquered surface or with a large range of melamine and lacquered finishes.

Dimensions: Panel sizes are limited to those of the materials, usually 2400x1200 mm and those of the machinery (usually 3000x1500 mm). The more common thickness of the panels is 16 mm, installed using a structure made of slats 16 mm thick, thus the total thickness of the assembled set is approximately 32 mm. Being a product manufactured on request, panels can also be manufactured with other thicknesses available in the market.

Installation: We recommend assembly using tongue and grove between panels, but we can adapt our panels to any other anchoring systems you may require in your project.

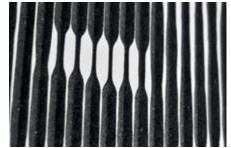

Image formats accepted: You may supply high quality images, with a high contrast, black and white images if possible, in any of the usual graphic formats (jpg, tiff, ...)

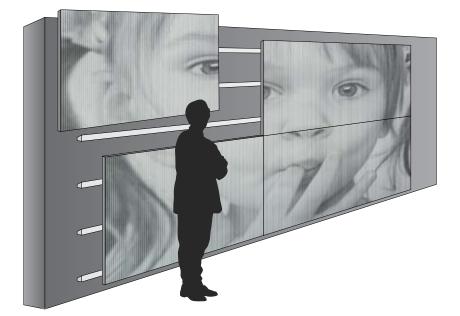

High Definition. Slot pitch between 3.5 and 1.5 mm. To be visualized at distances lower than 2 m.

Medium Definition. Slot pitch between 7 and 4 mm. To be visualized at distance between 2 and 4 m.

Low Definition. Slot pitch between 12 and 8 mm. To be visualized at distance greather than 4 m.

Curved dukta

Decustik by dukta decorative panels are conceived to be installed over a curved structure, usually made of wood. Several solutions and anchoring clips are available to facilitate assembly of panels. For thicker panels like JANUS model (between 25 and 27 mm), we recomend to use a specific metal comb. For thinner models, with thicknesses between 8 and 10 mm, we recommend to assemble directly over the curved structure with gun nails and glue. Dukta panels are supplied with over-measure and must be cut directly at site. To finish the panels we recommend to apply once installed finishing oils, lasur or paints. We do not recommend finishing before assembly, as cured varnishes and lacquers can break when bent. For a greater acoustic absorption we recommend to istall mineral wool behind the panels, covered with a black acoustic veil stapled to the structure.

JANUS
Usable area:
2300x950 mm
Gross panel size:
2500x1020 mm
Minimum radius approx:
≥ 100 mm
Mat. and thicknesses:
Spruce 27 mm, 7 kg/m²

Raw MDF 25 mm,

10.5 kg/m²

FOLI
Usable area:
2400x1160 mm
Gross panel size:
2500x1250 mm
Minimum radius approx:
≥ 230 mm
Mot. and thicknesses:

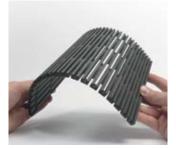

LINAR

Usable area:

2350x1200 mm

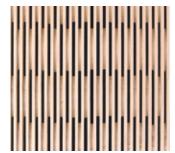

Gross panel size: 2500x1250 mm Minimum radius approx: ≥120 mm Mat. and thicknesses: Raw MDF 8 mm, 4 kg/m² Black MDF 8 mm, 5 kg/m² Beech Multilayer 9 mm, 4 kg/m²

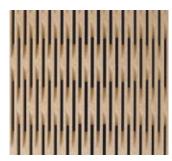

SONAR
Usable area:
2300x1200 mm
Gross panel size:
2500x1250 mm
Minimum radius approx:
≥150 mm
Mat. and thicknesses:
Raw MDF 8 mm, 4 kg/m²
Black MDF 8 mm, 5 kg/m²

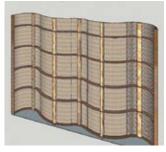

Assembly concept for curved panels

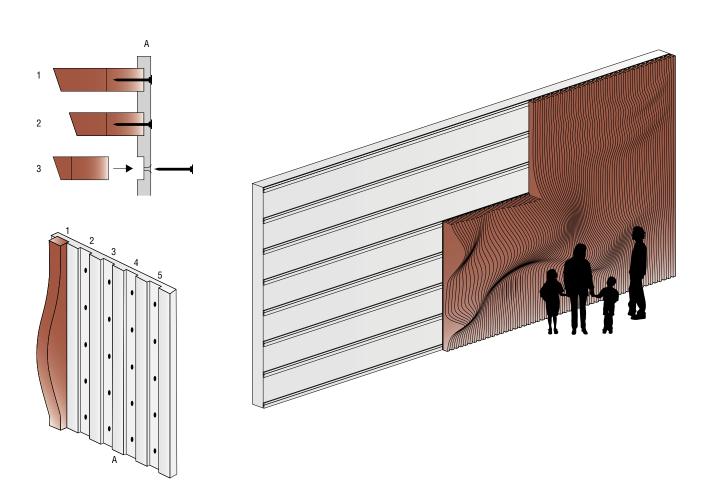

Slatted walls 3D

We manufacture panels in different materials (natural wood, plywood, MDF, ...) and finishes, to decorate walls and ceilings. From a standard dimension of slats 40 mm width, 80 mm pitch, a variable depth from 130 mm to 800 mm and a maximum total thickness of 830 mm, we can adapt different designs to the requirements of any project. Panels and strips are delivered numbered to facilitate the assembly of every element to the correct position. Support panels are usually manufactured using black MDF and can also be delivered machined with holes or large grooves for a better acoustic performance of the room. Due to the important weight of these structures, which can be around 200 kg/m², it is very important to ensure their correct fixing to the wall.

Assembly concept for Slatted walls 3D

For a greater ease in assembly, both the slats and the support panels are delivered perfectly identified. Once the slats on the panels are installed, sets can be installed on the walls. Prior to installation, it is very important to calculate the strength of the walls to be covered and to use the appropriate fixing system to support expected loads.
